ABOUT PLASTPRO

We choose a door for its aesthetic qualities, but doors offer so much more than a cohesive look for our homes. Our front doors are the gateway to welcoming guests and loved ones. From ushering us into the start of the day to welcoming us back to our homes and families at the end of the day, doors are an important and impactful part of the house. They reflect our style and offer protection for the people that matter most. We want you to choose a door that best represents you, makes you feel secure, and fits your needs.

Since 1994, Plastpro has focused on providing a superior product with the best value, technology, and commitment to our customers. Wood and steel doors were historically preferred in the industry, but both come with long-term problems, such as rotting, rusting, and weather damage. Our fiberglass doors are the best solution for these longevity issues. They are not susceptible to weather damage, require less maintenance, and offer higher performance ratings. We’ve introduced the first door with composite stiles and rails, HydroShield Technology, and composite Polyfiber (PF) Frames to the industry. Our doors feature a full-length LVL block that provides stronger rigidity and allows a range of door locks and hardware to be installed for increased security. We carry a wide variety of designs, sizes, and styles to elevate any home.

From the beginning, we’ve been committed to providing superior products and to creating opportunities. Our goal is to create positive change for our employees, customers, and our community. We believe in doing good for the world and making a difference. For us, success is only as good as the good it creates. We’ve continuously partnered with Habitat for Humanity to create affordable, green houses for low-income families across the nation. We’ve donated more than 500 doors to various chapters of Habitat for Humanity and other non-profit organizations. With a Plastpro door, you not only acquire a beautiful door with the best quality, you join us in giving back to others.

TECHNOLOGY

Plastpro brings the latest technological advancements to the industry to meet the needs of our customers. Our commitment to quality is backed by extensive research and vertical integration, ensuring consistently innovative products. Through vertical integration, we control each stage of development, prioritizing improvement from raw materials to the finished product. Since the opening of our Ashtabula, Ohio plant in 2005, Plastpro has achieved even greater quality control, as well as the flexibility to create new products to better react to market need and demand. We’re able to offer homeowners the widest possible choice of product designs and sizes. From our design process, to the assembly and delivery of our products, Plastpro ensures everything we do meets our rigorous standards. We have built a reputation for offering the best quality and innovative products through extensive research and technological developments.

SUSTAINABILITY

Plastpro also does our part to preserve the environment by creating sustainable products. For us, sustainability means balancing our environmental, economic, and social goals. Fiberglass is a natural choice for consumers seeking green, sustainable building materials.

Our fiberglass doors are a great, green alternative because they are durable, have a longer lifespan, are energy efficient, and environmentally friendly. We are especially proud of our proprietary foam core- not only does it provide superior insulation, it is compliant with the Environmental Protection Agency’s SNAP 20 regulations for cleaner air, contains no Volatile Organic Compounds, and makes use of more sustainable alternatives for foam blowing agents when possible- both zero-ozone-depleting blowing agents and low Global Warming Potential (GWP) blowing agents.

And we can’t leave out our fiberglass itself: the material is designed to last for decades and is impervious to time, temperature, and corrosive agents, leading to less waste. The longer lifecycle of the fiberglass material also makes Plastpro doors more cost effective and reduces the amount of resources needed for manufacturing. Plastpro doors require less maintenance than traditional wood doors, which consumes a large part of a building’s budget. Over a building’s lifetime, maintenance can easily exceed the original construction costs.

ENERGY EFFICIENT

Plastpro is committed to providing sustainable products for our customers while maintaining the integrity and balance of natural resources. Choosing a Plastpro door means selecting the best value for you, while minimizing your long-term environmental impact.

Fiberglass doors are one of the most energy-efficient building products available on the market. Our fiberglass doors maximize insulation with high-density, polyurethane foam cores. Thorough insulation is one of the best ways to reduce energy consumption and building operation costs by sealing out the elements. Therefore, our ENERGY STAR Qualified Doors offer homeowners savings by conserving electricity and lowering bills, while also improving comfort and helping protect the environment.

SECURITY

As a door company, one of our most important goals is providing families with safe homes, which is why the anatomy of our fiberglass doors has been thoughtfully designed to provide one of the most secure doors on the market. Fiberglass doors are much less likely to be dented or damaged by impact compared to their wood counterparts. Plastpro’s door skins are manufactured with SMC skin technology, a glass fiber reinforced polyester material that is even stronger than standard fiberglass- making our doors extremely resistant against outside force. Meanwhile, the inside of a Plastpro door is filled with high-density foam that provides firm structural support due to its rigid, tight packing.

Plastpro’s doors are also equipped with a full-length lockblock made of laminated veneer lumber (LVL). Most other fiberglass doors have lockblocks that only surround the immediate 18- 20” vicinity of the lock, and the rest of the space above and below is filled in with foam. However, our lumber runs the full vertical length of the door, providing additional rigidity that prevents the door from being kicked in by an intruder or blown in by severe weather. Additionally, the LVL material will absorb bendable stress without snapping, unlike a wood material. Of course, the extended lockblock length also adds holding strength for the lock and can easily accommodate any lock or additional hardware you choose.

WARRANTY

We are proud to offer one of the best warranties in the industry. Plastpro products are held to high standards. We stand behind our products and guarantee the best quality to meet your performance expectations.

PLASTPRO'S QUALITY

PATENTED HYDROSHIELD™ TECHNOLOGY

Our exclusive HydroShield Technology protects our doors against moisture and humidity infiltration by creating a fully composite barrier that encases and protects the door on all six sides. It prevents warping, delamination, corrosion, rotting, and the buildup of mold and mildew. When paired with our Polyfiber (PF) Door Frames, our doors with HydroShield Technology create an impenetrable entryway.

1 FIBERGLASS REINFORCED DOOR SKIN

Our exclusive formula is measured precisely to ensure each skin is produced to the highest quality. We offer many stunning design options, and customized panel configurations are possible. The skins require little maintenance and will not splinter, dent, warp, rot, or rust. Choose a door skin from a variety of grains that can be painted or stained.

2 FULL-LENGTH COMPOSITE STILES

Our full-length, composite stiles protect the door from external moisture to prevent warping or rotting. They have twice the screw-holding strength of wood.

3 COMPOSITE TOP & BOTTOM RAILS

High-strength, composite top and bottom rails prevent moisture from seeping into the door and stop the buildup of mold.

4 EXTENDED LOCKBLOCK

Plastpro's full-length LVL allows any type of lock to be placed for increased security. Our 8/0 doors have a steel bar in addition to the LVL to help increase the structure's rigidity.

5 POLYURETHANE FOAM CORE

Our advanced, CFC-free, high-density, polyurethane foam core enhances the door's soundproofing capabilities and provides insulation up to six times greater than wood doors.

BACKED BY WARRANTY

We are proud to offer one of the best warranties in the industry. Plastpro products are held to high standards. We stand behind our products and guarantee the best quality to meet your performance expectations.

NOMINAL SIZE

LIMITED SERIES

Our Limited Series was created to showcase the richest, most luxurious graining available. This line includes Knotty Alder, which features a rich grain patterned with knots, and Teak, a worldwide favorite for its beautiful, straight, yet occasionally wavy or interlocked grain patterns. Giving off a natural luster and luxurious feeling, these doors are status symbols.

CRAFTSMAN SERIES

The Craftsman Series pulls design inspiration from 19th and 20th-century architecture, featuring flat panels and traditional styles. This series combines modern and classic elements with a selection of ovolo profiles, simple Shaker profiles, and sleek direct glazed options. Skin options in this series are Fir and Smooth.

NOVA SERIES

The Nova Series features glass that is directly glazed into the door to create a seamless blend between the glass and door. The large glass pane allows the most scenery and natural light into your home. This generous portion of glass is available in two models: the 45 with a traditional, Craftsman sticking, in a Smooth or Fir skin, and the 90 with a modern, Shaker sticking and Brushed Smooth skin.

DOORLITE SERIES

A beautifully designed entryway helps set the stage for the rest of the home and creates a welcoming passage from public space to private abode. Nothing accompanies that transition better than our exclusive glass designs, which improve the look and value of the home.

Our doorlites are composed of a piece of decorative glass sealed between two pieces of tempered safety glass that provides exceptional security, soundproofing, and thermal performance. The state-of-the-art Warm Edge spacer system provides a seal that protects and insulates the door and home for years to come. Unlike the competition, our metal coming includes a gasket that cushions and protects the glass from chipping, cracking, and rattling during door movement.

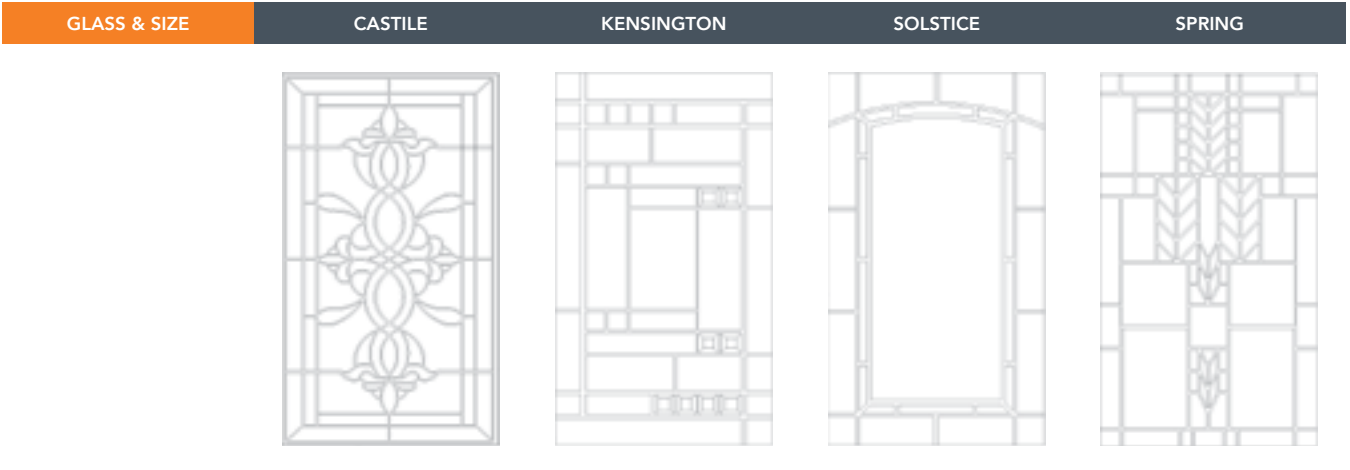

PG 210 - 215
